### 大田小学校 ふれあい給食

本日の日程

12時～	招待者集合	趣旨説明と歓談
12時20分～12時25分	各クラスの児童がお迎えに来ます。	
12時25分～13時05分	「ふれあい給食」	
13時10分	給食終了後、図書室へ	
13時30～14時30分	なかよし集会 「創作狂言 手ぶくろ」 「創作狂言 ねずみの嫁入り」 「創作狂言 金のがちょう」 お時間の許す限り、ご参観ください 発表会終了後、解散	

ふれあい給食のクラスは  です。

本日のこんだて

	ご飯 牛乳 あじの野菜あんかけ

The present invention relates to a pressure relief device. The invention is useful in a wide range of applications. In a first embodiment of the invention, the device is useful in a double walled pressure vessel, such as a tank. In a second embodiment, the device is used for various applications in medicine, such as puncturing intravenous injection ports. 1. A double walled

---

pressure vessel comprising, in combination, a wall defining a first chamber containing a first fluid, and a wall defining a second chamber containing a second fluid, with a pressure relief device between the two chambers and including a hole for providing access to the first chamber through the wall of the pressure vessel. 2. The double walled pressure vessel of claim 1, wherein the first chamber is an outer chamber and the second chamber is an inner chamber. 3. The double walled pressure vessel of claim 1, wherein the first chamber is the inner chamber and the second chamber is the outer chamber. 4. The double walled pressure vessel of claim 1, wherein the pressure relief device includes a plug comprising a first valve member and a second valve member. 5. The double walled pressure vessel of claim 1, wherein the hole is an air vent hole. 6. The double walled pressure vessel of claim 5, wherein the air vent hole is open to an air space outside the pressure vessel. 7. The double walled pressure vessel of claim 6, wherein the pressure vessel is positioned within an outer container that includes a vent through which the air space can be vented. 8. The double walled pressure vessel of claim 1, wherein the hole is an injection port, and the pressure relief device includes a plug that includes a first valve member and a second valve member. 9. The double walled pressure vessel of claim 8, wherein the first valve member comprises a flexible membrane. 10. The double walled pressure vessel of claim 8, wherein the first valve member is an injection port in the flexible membrane. 11. The double walled pressure vessel of claim 10, wherein the first valve member is sealed to prevent fluid from the first chamber from contacting the first valve member. 12. The double walled pressure vessel of claim 11, wherein the second valve member is an injection port in a second flexible membrane, and the second flexible membrane is sealed to prevent fluid from the second chamber from contacting the second valve member. 13. The double walled pressure vessel of 82157476af
